## (54) SYSTEM AND METHOD FOR AUTOMATICALLY SELECTING PROVIDER CONNECTION STATION

## (57)Abstract:

**PROBLEM TO BE SOLVED:** To obtain a system for automatically selecting a provider connection station where the connection can be enhanced.

**SOLUTION:** This system is configured such that a server 5 being a provider stores a telephone number table describing the telephone numbers of a mobile phone 2 such as a PHS connected to a mobile terminal 1 for communication and access points 3,..., 3 being at least two wireless communication stations connected to the mobile phone 2 via the Internet 4. This system has a GPS function of discriminating the location of the mobile terminal 1, the server 5 discriminates an optimum access point at a location of the mobile terminal 1, and the server 5 rebuilds up the connection to the mobile phone 2 via the optimum access point 3 on the basis of the discrimination when the mobile terminal 1 accesses the server 5. Then the mobile phone can be connected to the optimum access point at all times regardless to the location it is resident.

## LEGAL STATUS

[Date of request for examination] 15.02.2001

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 3424641

[Date of registration] 02.05.2003
